2. Citations and explanations

Document DE 198 50 964 A (D1) is considered the closest prior art and discloses the features of the preambles of independent claims 1 and 7.

The subjects of these claims concern the conveying of groups of sheets to a sheet separation device. The method according to claim 1 and the conveyor device according to claim 7, which device is an inclined conveying device, are not known from the search report citations and are therefore novel.

The solution to the above problem, as proposed in claims 1 and 7 of the present application, also involves an inventive step (PCT Article 33(3)) because the features of the characterizing parts are not known from any of the prior art documents. The combination of these features is therefore not obvious.

Claims 2 to 6 and 8 to 15 are dependent on claim 1 and claim 7, respectively, and therefore likewise meet the PCT requirements for novelty and inventive step.
